

AutoFlow Brand Style Guide

1. Design Principles

- **Consistency:** Every colour, component state, and spacing value follows a predictable system across the platform. All layout spacing strictly uses a 4px base unit grid.
- **Simplicity:** Interface elements are strictly functional, eliminating unnecessary visual noise to focus on critical trading data, real-time charts, and decision-making.
- **Responsiveness:** Formatted primarily for desktop analyst and trading workstations (1024px+ with a 12-column grid layout) while maintaining full tablet compatibility (768px+).
- **Accessibility:** Engineered to meet WCAG 2.2 Level AA compliance, ensuring full keyboard navigability and strict high-contrast text ratios.

2. Colour Palette

The AutoFlow dark theme utilizes a refined palette optimized for low eyestrain during financial monitoring, high data readability, and sharp visual hierarchy. Every colour in the interface comes directly from this system.

Primary Surface & Core Palette

Swatch Name	HEX Code	Color	Applied To / Usage Context
Canvas Dark	#231f20		Main application background canvas and primary dark sidebar surface.
Card Charcoal	#2b2b2b		Dashboard containers, panel backgrounds, and modal cards.
Pure White	#ffffff		Main content text, highlights, active headers, and ghost button fills.
Trading Emerald	#3dbf79		Accent highlights, active navigation pills, focus rings, and primary CTA buttons.
Neutral Grey	#c3c3c3		Subheadings, secondary labels, placeholder text, form input borders, and dividers.

Semantic & Financial State Colours

These semantic colours communicate system states and asset returns:

Status	HEX Code	Color	Usage Context
Success / Profit	#2a9a5e		Positive asset returns, verified authentic data, and completed buy transactions.
Error / Loss	#e53e3e		Negative asset returns, sell actions, destructive buttons, and critical alerts.
Warning / Pending	#d97706		Pending order executions, inconclusive strategy backtests, and caution alerts.
Info / Processing	#2b6cb0		System status updates, running backtests, and interactive info tooltips.

Logo and Inconography:

Minimalistic, professional, and visually communicates "financial growth". This idea aims to coerce users into exploring the world of free, 'hands-off' AI trading.

3. Typography

AutoFlow enforces a dual-typeface typography structure to separate human-readable interface copy from precision financial data.

- **Primary Interface Font (Afacad):** Handles all readable interface text, headings, body copy, and UI action labels.
- **Monospace Financial Font (JetBrains Mono):** Used exclusively for machine-generated values, monetary amounts, stock tickers, order IDs, and system codes.

Type Scale

Style	Typeface	Size	Weight	Used For
Display	Afacad	36px	Bold (700)	Landing hero titles, splash screens
Heading 1	Afacad	28px	Bold (700)	Main page section headers & primary titles
Heading 2	Afacad	22px	Bold (700)	Panel headers, modal titles, section subheadings
Heading 3	Afacad	18px	Bold (700)	Card titles, widget headers
Body	Afacad	16px	Bold (700)	Standard interface body copy and descriptions
Caption	Afacad	12px	Bold (700)	Input labels, metadata, chart legend text
Overline	Afacad	11px	Bold (700)	Upper-case status tags, table header categories
Code / Financial	JetBrains Mono	13px	Regular (400)	Tickers, prices, order amounts, hashes, IDs

4. UI Component Specifications

Buttons & Interactive Controls

Every button component implements eight distinct visual states:

- **Default:** Set in Trading Emerald (#3dbf79) with white text (#ffffff) for positive confirmation actions.
- **Hover:** Darkens to #2a9a5e on pointer enter.
- **Active:** Darkens to #259058 on mousedown.
- **Focused:** Displays a 2px green indicator ring (#2a9a5e) for keyboard traversal.
- **Disabled:** Light green fill (#d4f5e4) with grey border (#C3C3C3), blocking click events.
- **Loading:** Displays an inline loading spinner while setting `aria-busy="true"`.
- **Danger:** Set in Error Red (#e53e3e) for destructive actions.
- **Ghost:** Transparent fill with a 1.5px Trading Emerald border (#3dbf79) for secondary actions.

Form Inputs

- **Default:** Dark background with a 1px Grey (#C3C3C3) border and placeholder at 60% opacity.
- **Focus State:** Highlighted with a 2px Emerald Green (#3dbf79) border.
- **Validation Error:** Highlighted with a 2px Red (#e53e3e) border accompanied by plain-language validation feedback directly below the field within 200ms.
- **Success State:** Highlighted with a 1px Emerald Green (#3dbf79) border.

Sidebar Navigation

- Fixed vertical panel with a dark background (#231f20).
 - Navigation items list vertically; the active navigation link features an Emerald (#3dbf79) pill background paired with dark text (#231f20) for high visual contrast.
 - Inactive navigation links use White text (#ffffff).
-

5. Accessibility Framework (WCAG 2.2 Level AA)

- **Color Contrast Ratios:** Tested against WCAG 2.2 AA standards:
 - White text on Black surface (#231f20■ / #ffffff): **17.5:1** (Passes AAA).
 - Black text on Grey background (#231f20■ / #C3C3C3■): **6.1:1** (Passes AA).
 - White text on Error Red (#ffffff / #e53e3e■): **4.6:1** (Passes AA).
- **Keyboard Navigation:** All interactive trade controls, forms, and modals are reachable via sequential Tab navigation with visible green focus indicators (#3dbf79■).
- **Screen Reader Compatibility:** Decorative icons use `aria-hidden="true"`, while meaningful controls and status badges provide descriptive `aria-label` text.
